

GEOGRAPHIC INFORMATION SYSTEMS (GIS) //

SAM provides an extensive range of GIS and GPS services to municipalities, counties, utility companies, state agencies, and numerous private sector organizations.

Equipped to offer a complete solution, SAM's longstanding tradition of quality GIS services provides accurate and dependable programs our clients can trust. You will not find our programs collecting dust on a shelf or space on a hard drive. Every day our clients are putting these resources to work in the office and out in the field, to aid in daily operations and support more effective decision making.

Our unrivaled implementation and support services make us an industry leader in developing effective* GIS programs. At SAM, we do not deliver data—we deliver smarter data and we support it after delivery with easy-to-use, cutting-edge tools for analysis. Discover how SAM's fast, data-rich GIS services can support your next program, as well as your daily operations.

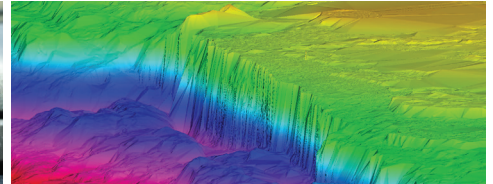

GPS Data Collection

SAM has dedicated GIS field crews specializing in RTK geomatics and mapping grade GPS technology, specifically customized for use with digital applications that automatically upload attributed field information for every feature collected. Our experienced GIS field crews have GPS located millions of utility features across the nation. We offer not only a solid understanding of how to use GPS for features and utility locations, but the expertise to find your utility infrastructure including water, sanitary sewer, storm water, gas, telecommunications and electric.

Inspection & Inventory

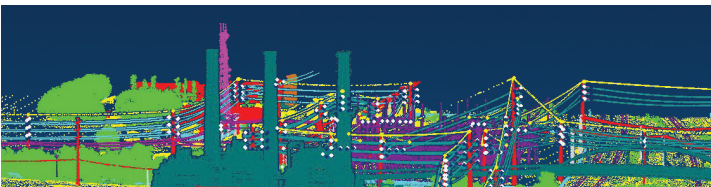

SAM's GIS field crews know spatial accuracy is crucial, but as utility experts understand there is more to each dot on the map. Recording the characteristics and attributes of each structure is one of the many ways SAM goes above and beyond for our clients. We provide infrastructure inspections and inventory services to all sizes of utilities. We have expertise in electric power infrastructure, gas distribution, sanitary sewer collection, storm water networks, and water utility systems.

Mapping & Data Development

With over 20 years of experience in Esri® mapping technology, SAM develops the very best data for our clients. Unlike many firms, we do not just deliver data, but design the method of delivery to match the resources of our clients, and implement the resources needed for on-going GIS success.

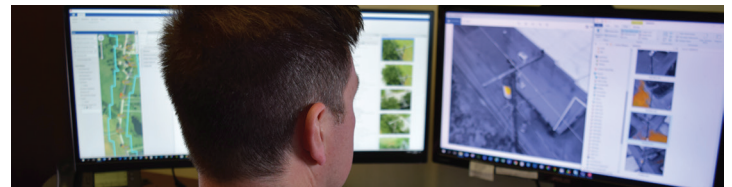

SAM has a long history of building clean, accurate GIS data and performing spatial analysis for cities, utilities, counties, government entities, and private firms. Our ability to scale between small and large programs efficiently with staff and scheduling ensures that 100% of GIS data development is done in-house by SAM staff.

Web & Mobile Applications

GIS programs are only as successful as the method used to maintain them, and we believe every client should have a reliable, easy to use GIS. That is why we offer SAM Integrity™, powered by Geocortex®, our web-based software application to access, edit, maintain, and analyze your GIS data

Built on Esri® technology, this intuitive program has built-in workflows to support daily operations and asset management. Integrity™ is easy to use and allows users in all departments, at all levels of GIS understanding, access their GIS data from any computer or mobile device, anytime, anywhere.

Maintenance & Support

SAM is committed to continually supporting our client's GIS efforts— in every way. From remote and on-site training, to technical support and maintenance, our friendly professionals keep each client moving in the right direction

Beyond data development, our experienced GIS staff provides routine maintenance for clients all over the United States in an efficient, cost-effective manner. All work is done in-house from start to finish, never cutting corners. We have dedicated support staff ready to assist with all technical GIS needs.

What differentiates SAM?

SAM has built a reputation as a trusted, knowledgeable, and innovative partner. SAM transforms petabytes of complex spatial data into intelligent insights in a holistic Managed Geospatial Services™ (MGS™) framework. As North America's premiere MGS™ company, SAM provides practical, precise, and high-fidelity solutions designed to enhance decision-making, mitigate risks, achieve strategic objectives, and drive costs out of our client's business. Our vision is to advance spatial data acquisition, improve analysis capabilities, and develop predictive analytics to redefine and transform how infrastructure assets are developed and managed throughout their lifecycles.
